

Testing flow

When tester finds a bug while testing user story, bug is reported as an issue in project's board. Example:

- While testing user story regarding displaying statistics:

[Cards with statistics · Issue #61 · IIS-ZPI/ZPI2024_zaochni_Orzel](#)

Tester found a bug in the way dominant is displayed and added a comment to the issue:

“In dominant tile there is no "-" mark when there is no data about dominant values
Bug reported in issue [#88](#)”

- The bug is reported as an issue and marked as a bug:

[Mark missing dominant value · Issue #88 · IIS-ZPI/ZPI2024_zaochni_Orzel](#)

- Developer fixes a bug and tester tests pull request to make sure that it works as expected (pull request has the bug attached):

[Fixed dominant display by BartStud · Pull Request #89 · IIS-ZPI/ZPI2024_zaochni_Orzel](#)

- Developer merges the PR when accepted by tester. Tester closes the bug.
